A. Letter to Intelligence Community Senator

EXECUTIVE SUMMARY

There has been a flood of human rights abuses existing within Santa Barbara County and there appears to be no resources or ways to fix these problems outlined herein. In fact, constant attempts to communicate such human rights abuses have led to a dead end or mere ignoring of reality. Political terrorism and state-sponsored terrorism is the only conclusion.

HUMAN RIGHTS

Life / Liberty

Every human has the right to life and liberty.

Fair & Equal Justice

Every human has the right to fair and equal justice.

Due Process

Every person has the right to due process.

III. ABUSES

A. Economic Rights

1. Workplace

a. AT&T

i. It's Secure.

case: I'm telling you it's not.

b. Pitney Bowes

i. I already canceled.

case: It takes three cancellations, not one.

B. Hispanic Rights

1. Universal

There has been a string of killings by Santa Barbara County Sheriff personnel on their own staff and on the community resembling state-sponsored terrorism. The District Attorney as a public elected official for the district within the State of California justified a number of terrorist acts, which the United Nations finds as human rights violations. There were no helicopters used for any of the ten shootings throughout the county, but rather left to die. Thereafter, the county sheriff chose to throw a party and said he was proud of them; then, asked the county for more money after the party bash. The media continues to support both agendas even after doctoring it. It is our duty to hold these acts as a public record for LIFE just like the county does for much lesser ones.

a. White House Executive Order

i. Re Unjustified Killings

case: Albert Covarrubias, Jr.

No DNA evidence was presented. So, why would someone allow to be charged or have any allegations made? No death penalty would have been given, so why kill?

Legal Analysis & Conclusion:

C. Privacy Rights

1. Educational

There have been privacy rights abuses directly related to obtaining an education here at our nonprofit from intelligence operatives. The most striking aspect of the abuses is no one seems to have an immediate solution, but rather providing a deterrence. Detours related to traffic congestion is a way to patch the problem, but the problem exists forever. In the online underground, privacy rights are abused on a continual basis that never goes away. No one seems to stand up to the abuses, but rather only make a minor stand through a press release. The corporation or vice president has been hacked is the news story. Yet, courts are confronted with another angle of its own intelligence community, but seem to lack the courage in confronting their own government. So the abuses continue and teachers at educational institutions are faced with simply placing deadlines as a barometer leaving its students to find detours in meeting the grade, if possible.

a. Capella University

i. hijacked phone call

case: false allegations

b. Santa Barbara City College

i. Wiretapped phone

case: stress test

c. Aspen University

i. Poisoned phone line

case: false portrayal

As stated in Workplace below during the month of February 2013, workplace productivity was minimized in conjunction with ability to perform online research for assignment papers. Research was left to the textbook, but was distracted after ordering two hard drives, as well as, two separate laptops. In addition, Windows Updates required two separate entire downloads after operating system installations further delaying educational focus and productivity. AT&T was canceled as an account, but required an additional direct and firm cancellation. This led to use of phone line for economic reasons, as well as, year-long AT&T intelligence interference harassment. The use of a phone line did not help once intelligence figured out what was occurring maximizing its opportunity to turn the laptop into a crash blue screen when phone line was plugged in to connect to the internet via NetZero and BlueCasa. The ability to connect via the phone line was no longer available. Thus, requiring a mile-long walk to the nearest McDonalds for one-half hour of free AT&T wifi use. The result of these hardships have caused module discussion postings to be delayed, but within the universities policies of attendance. However, lack of internet availability, computer malfunction, and software distractions has seriously jeopardized the assignment module progress requiring retakes in both criminal justice classes. Furthermore, portrayal of a below average student requires re-educating school personnel on the issues at hand, which has little effect due to the power of intelligence security clearances. This causes further concern for those who may seek educational records and be led with a false portrayal of students academic abilities. The ability of intelligence community members to jeopardize a students reputation, or right to an education is a human rights issue. Simply making it a human rights issue is not enough as it needs to be confronted with a solution rather than allowing it to continue for others for the public interest.

2. Workplace

There have been privacy rights abuses directly related to effective productivity here at our nonprofit from intelligence operatives. Our ability in speaking out has been greatly limited by nonstop counterintelligence campaigns. On February 20 2013, our laptop was hit by a cyber strike taking out our ability to do any work on the computer or get online. This is not the first time this has happened as it last occurred in **2012**. There was a very strong feeling that our voice was being silenced and that people were attempting to get away with murder in our fight for Life / Liberty, Fair & Equal Justice, as well as, Due Process. This was not the first time our voice felt silenced as it happened in **2011-12**, while we were fighting for economic rights and human rights for truckers in Santa Barbara County.

a. Trucking Rights

i. Stealing Spaces

case: hello, fire [truck]

b. Human Rights

i. Stealing Ideas

case: compulsive liars

No matter what issue we are working on there is a constant presence that merely watches behind the walls through phone line wiretaps and satellite cable taps to steal our ideas. Stunningly, these same people are the ones going after people who steal and yet are the ones stealing on a daily basis throughout the day as intellectual property thief's. They have gotten so use to being thief's themselves that lying about it is a habitual habit referred to as a compulsive liar. They steal your posture, location within your home, and even capturing screen shots off your phone—nothing is private.

ii. Intelligence Community (IC) abuses re: assassination readiness

case: guest room closet / wall clicks

The guest room is a mobile location located in Buellton, California within the unincorporated area of Santa Barbara county. The physicality is located in a homeowners association that is supposedly private with a gate code. The incorporator who has been following intelligence abuses via American Civil Liberties Union (ACLU), and Electronic Frontier Foundation (EFF) was affirmed by a police officer that a search could only be conducted via a warrant. Yet, wall clicks resembling the sound of a wiretap or image snapshot or on / off switch adjustment via cable taps has been conducted within the guest room closet for years. The guest room closet attic houses lots of white cables leading to the DirectTV satellite dish that sits directly above between the two guest rooms. Initially the clicks came from the guest room closet attic where these white cables are located. The white cables in the attic go in all directions throughout the house attic. Vandenburg Airforce Base is only 15-20 miles away and has been sending new spy satellites into space over the years according to publicly made news reports. The clicks have spread out of the guest room closet into the walls and ceiling via cable taps resembling technology matched by intelligence clandestine operations. News reports revealed an intelligence officer had retired

at Vandenburg.

case: gun shots

One time a police officer stopped by the location after a phone call was made by the incorporator regarding hearing gun shots within a 100 meter radius, which is against county code ordinance. The county code ordinance says not to shoot around any property dwellings in the surrounding areas, especially if habitable. One officer stood in front of him with his hand on his pistol, while the other officer to the incorporators left. The incorporator pointed to the direction where he heard the gun shots. The officers said there was a gun range back nearby. The incorporator said the gun range was close to the archery field located nearly a mile away. The incorporator said the sounds came from a different wave sound location. In fact, there have been accounts when the gun shot sounds have come at two different locations along McMurray Road directly across the location, and others from the Bobcat / San Carlos area. On more than a few occasions beyond coincidence, while the incorporator was moving around waking up he was awoken to gun shot sounds as to say stay in bed. Most of these sounds have occurred during and after the string of officer-involved shootings within the county, as well as, during the gun control debate. To carry things further into the community, as the incorporator was faced with finding an internet connection walking into town, he would hear blocks drop and other intimidation tactics to play around with his disgusted outlook to gun killings.

case: interference / disruption

case: r&d speech

case: sonar release / infection

case: closing pores

The ability to close facial pores is a process of utilizing water pipe interference to disrupt through the switching of valves to allow or minimize water traffic whether hot or cold. The switching of hot water to warm water to cold water via satellite wave technology or location analysis is sensor based pinpointing the whereabouts of the skull. The skull angled within the shower at proximity to the shower head can switch off or on the water temperature to be colder. The colder water temperature closes the facial pores at the right time making it more difficult for the skin to breathe thus causing pimples to be exposed. Pimple generation is a tactic by intelligence to cause delay of public appearances, especially for advocacy or public relations purposes. The incorporator of a corporation is allowed to be the promoter of the corporation, which entails making public appearances. However, if intelligence does not accept your opinions made in the public forum because it may sway public opinion that is of public interest they may chose to use this particular tactic. The public forum includes making publicly made statements during public comment at city council meetings where an intelligence officer may be present or heard thereafter via recorded audio / video. The use of the shower tactic has been used throughout the 2012-2013 fiscal year picking up during current events, and meetings while slowing down after political agenda decisions have been completed.

case: location analysis

The basis of location analysis uses walls and ceilings as a conductor to capture satellite imagery via the cable tap. This technology can pinpoint with utmost accuracy your location, posture and date / time stamp it. The location is archived for historical data comparisons of present behaviors to past. This data can predict your conduct before you know due to habit. Location analysis is dangerous data that can plan out assassination attempts. This foresight was imagined when location analysis first entered the guest room following advocacy work. In fact, an abundant amount of location analysis wall clicks were heard

capturing my every move, posture, and location. The tone of the clicks were confident with an air of mere planning. The data captured knew my every move and location to conduct a targeted campaign. The tone of the clicks even resembled weaponry. As I was getting closer to graduating with a degree the amount of clicks heightened, especially during PHY1000 Astronomy where I even had DoD classmates. I had to move to another room just to concentrate. I was surprised to hear ceiling clicks inside the library at Santa Barbara City College (SBCC) directly above me as I was reading near the newspaper rack. It felt as if the clicks were kind of amused. I was impressed when the glass window and frame next to me was being delicately touched when I was at the Santa Barbara County Public Library.

case: monitoring and harassment

case: intelligence traffic / reverse 911 alerts

The homeowners association seems to house intelligence within its private arena utilizing the intelligence information from nonstop location analysis and monitoring. What appears to be neighbors merely driving up and down the gated road along the mobile location are actually receiving a signal that strongly resembles a reverse 911. Reverse 911 calls have been reported in the news that will inform all businesses about any suspicious activity. The reverse 911 concept has been applied to the homeowners association jurisdiction possibly due to a government contractor. This method has been taken to the extreme where a month prior to the anniversary death of a shooting seemed to invite hundreds of cars driving along the road at a one-minute interval apart. An exceedingly high correlation between the traffic moving up and down the road along the mobile location would knock or intercept any wireless internet signals. This enormously long intercept campaign caused a loss of speaking out on life / liberty, fair and equal justice, as well as, due process issues. In fact, intelligence traffic is quite stealthy in appearing at a motions detection notice when compared to location analysis historical data to then speed at an intimidation tactics reverse 911 alert.

case: rapid response

It would seem more beneficial to the community to save tax payers money; yet, groups of people want to portray that a roundabout is needed to overtake the trucking community. Each time the incorporator walks into town 3-4 vehicles come from different directions to meet at Jonata Springs Road, Avenue of Flags, and Central Avenue, as well as, Highway 101 off-ramp. However, when the incorporator passes this area the meeting of traffic is no longer apparent. In fact, when the incorporator looks back again there is still no more traffic. This group of people want to portray that a roundabout is required or give the impression of something else. The traffic tends to appear at the Damasa, and Avenue of Flags intersection just as the incorporator is about to cross Damasa. In addition, as the incorporator is about to cross the off-ramp vehicles come swinging from Avenue of Flags onto the Damasa bridge. The amount of vehicles that pass into this area as the incorporator walks towards McMurray Road or back to Avenue of the Flags ranges between 10-20 vehicles. The vehicles head towards McMurray Road, or Avenue of the Flags, or leave onto Highway 101 Southbound or Northbound off-ramp, or onto Damasa bridge from Highway 101 Northbound on-ramp. Then, the amount of traffic in this Damasa bridge location drops to 3-5 vehicles by the time the incorporator is 200 meters away. The sidewalk is the next pedestrian right-away struggle with instant entrance and exits by sudden traffic along McMurray Road. The sidewalk encroachment becomes a challenge of who has the right-away of either the pedestrian or the vehicle. One time the incorporator was crossing an entrance when a vehicle turned into it to test his reactions, while another vehicle was about to leave the entrance. Another time the incorporator crossed an entrance on Highway 246 looking behind him with a vehicle waiting to turn in and another encroaching

the walkway. The incorporator continued onto a nearby entrance when he noticed crime scene tape on the pedestrian right-away walkway. One other area exists along Jonata Springs Road, particularly in the trees area closest to Caltrans, and the taller bush strip closest to the water stream bridge. The trees area is hidden from Highway 101 and has a slope to the Southern aspect, as well as, curve to the Northern portion. This area draws vehicles from both directions in the midst of blind spots that can pinpoint a criss-cross hit and run situation.

case: intimidation tactics

The private homeowners association and its surrounding area within a [EMAIL] has no problem shooting off their gun or making gun shot sounds. These gun shot sounds have been made as one is waking up from sleep to merely going outside in public. These scare tactics seem cowardly as these gun owners have to hide behind a gun shot sound. No one should have to be silenced by a gun shot, or fear of voicing their human rights. The gate committee of the so-called private homeowners association has no problem freely giving out their code to lookalikes, intelligence operatives, or even leaving the gate wide open after crying about wanting a good gate. Intelligence operatives who hide behind the walls utilize reverse 911 alerts to inform their drive-by vehicles to drive at a faster pace above the posted speed limit. The question is where is the road committee? The road committee and gate committee have no problem collecting fees from their membership, while speeding through with an open gate with potential children at play. If the media focuses on gangs, then an upbeat of black vehicles drive through. To blur the situation, white vans drive through to make it look as if a government contractor is a member of the homeowners association. If the city has a planning commission, or city council meeting then there is an uptick of vehicles that sit at the gate at night the night before with their headlights. During the day, vehicles sit past a wide open gate until you enter the hallway or near the window to simply drive right through in a parallel perpendicular fashion.

case: flushing out

case: underground fault creation & control

The intelligence community has been working with geographical tactics in developing an underground fault that is located directly under the closet within guestroom and guestroom restroom of the home in the private homeowners association known as Jonata Springs Homeowners Association in Buellton, California. In fact, r&d speech is so intimidated to the point of vulnerability that the intelligence community is challenging the publication of this report to control the secrecy of their corruption. If this society is scared to the point of falling or losing its power and authority they then control the movement of the ground and housing foundation via satellite technology.

case: suicide campaign

The intelligence community has been using their tools in wholesome in order to make society's leaders commit suicide by targeting the family unit. For example, the intelligence community killed Albert Covarrubias, Jr wife by making it look like she committed suicide, due to intelligence community abuses. Then, the intelligence community set up Albert Covarrubias, Jr to make it look like he committed suicide. Now, the intelligence community is targeting his cousin via counterintelligence, so he can commit suicide. The goal is obstruction of justice.

LEADERSHIP

Governmental

county commissioner: Membership within the homeowners association includes a county commissioner who is an attorney holding a PhD in government according to publicly made news reports.

Intelligence Community

Law

CONCLUSION

Human life should never be taken away. Instead, there should be a disclosed means to regain one's full liberty. To not regain liberty hurts one's economic rights. Every golden society should strive for economic rights for a higher quality of life for all.
